

EDUCATION**FORDHAM UNIVERSITY, GABELLI SCHOOL OF BUSINESS**

New York City, NY

MBA, Financial Technology (GPA: 3.94)

August 2024-May 2026

- Relevant Coursework: Intro to Fintech & Portfolio Management, Natural Language Processing, Data Analytics for Finance, Cryptocurrency Algorithmic Trading, Web Analytics, RAG and Context Engineering.
- Graduate Research Assistant working with Assistant Professor on Image processing project related to facial feature extraction such as Symmetry, Beauty Scores, and other metrics using Multimodal LLMs and CNNs.
- Vice President of Tech & Research at Fordham GSB AI Society: Responsibilities include managing and creating content on club website and developing and creating events such as workshops.

MCGILL UNIVERSITY

Montreal, QC

BEng, Computer Engineering

August 2015-December 2019

- Relevant Coursework: Applied Machine Learning, Artificial Intelligence, Design Principles & Methods, Intro to Software Engineering, Engineering Economy, Communications in Engineering.
- Head Teaching Assistant for Design Principles & Methods, a core ECE course that focused on designing a robot to navigate an obstacle course, teams had to go through a structured process of delivering the required specifications for the client (professors).

EXPERIENCE**TRINITY GROUP INTERNATIONAL**

Bridgeport, CT

*E-Commerce Seller (Amazon/Walmart)***Analyst/Technical Support**

March 2020-June 2024

- Created automation for tasks including evaluating listings and suggesting content improvements, along with buy box and new seller detection.
- Automated profitability audits and standardized excel sheets used for each account to keep information consistent.
- Created new workflows for external tools companies decided to implement such as Helium 10, Amazon Alerts, Keepa, etc.

NORTHPAGE INC

Southbury, CT

*AI Digital Marketing Company***Software Engineering Intern (Research & Development)**

May 2018-August 2018

- Participated in R&D Group providing services for numerous companies, including large corporate clients such as IBM. The platform developed hosted a minimum of 2000 concurrent users/customers.
- Performed general duties including going through backlog of tasks involving rewriting code efficiently, front end improvements, consolidating/refactoring code using regular expressions, etc. Over 30 primary tasks completed in a 4-month period.

MANNKIND CORPORATION

Danbury, CT

*Pharmaceutical Company specializing in Inhalable Products***Information Technology Intern**

May 2016-August 2016

- Conducted service including preparing computers for new employees; reformatting personal computers; installing new software programs; troubleshooting network system programs; attending to IT help requests via ssh/in person.

ACADEMIC PROJECTS**RAG and Context Engineering, Meal-Prep AI Service (Fordham)**

- Built a RAG-AI System web application (React frontend, FastAPI backend, ChromaDB for persistence) that uses GPT-4o/Gemini to automate personalized 7-day meal plans, nutritional tracking, and Google Calendar syncing and provides caloric tracking for entire week using attaching metadata to a recipe API used for initial recipe database.
- Project is hosted entirely on Google Cloud.

Cryptocurrency Algorithmic Trading, LLM-Based Crypto Sentiment Trading Signal (Fordham)

- Engineered a trading signal for multiple cryptocurrencies using Gemini API to classify sentiment (bearish, neutral, bullish) into numerical scores that would be fed into a regression model to determine trades from January 2023–September 2025, integrating minute-level price data from Binance via Python.

Natural Language Processing, Tool for Contract Risk Analysis (Fordham)

- Developed automated NLP pipeline to extract, preprocess, and classify contract clauses into low/moderate/high risk categories using regex for extraction, NLTK/WordNet for lemmatization/tokenization, and Bidirectional LSTM model in TensorFlow.
- Reduced manual legal review time by flagging risky clauses, addressing challenges in generalization across contract types.

Applied Machine Learning, Modified MNIST Dominant Digit Classification using CNN (McGill)

- Designed 4-layer convolutional neural network in PyTorch to identify the largest digit (by bounding box) in 64x64 multi-digit grayscale images, incorporating batch normalization, ReLU activations, max pooling, and dropout to prevent overfitting.

COMPETITIONS**UN Technology Sprint UNMAS/OICT**

Dec 2025

- Participated in group of 8 where the task was to deliver a web application to UNMAS group at the UN to streamline procedures instead of using their primary tool of two excel tables. Responsibilities included designing SharePoint List structures, developing the reports page in PowerApps to connect with the SharePoint List and creating of the Power BI Dashboard that the UNMAS uses for annual updates on their website.

Fordham/Deloitte March Madness Data Competition

Feb-April 2025

- Competition where teams were tasked with creating a model with any data to predict probabilities of March Madness games. Finished 2nd place out of 10 teams by creating a TensorFlow SNN model using provided data as well as data from external sources such as CBB, altitude data of campuses.

ADDITIONAL

- Programming Languages/Framework Skills: Java, Java Spring Boot, C, C#, Python, JavaScript, TypeScript, Next.js, React, SQL, Hadoop, Linux, Git
- Memberships/Volunteer: Musician for Blackrock Easton Church located in Easton, Connecticut
